Get more out of your ServiceNow & Okta integration.

Yansa Labs' Okta Orchestrator adds self-service, governance, and automation to your Okta/ServiceNow integration. Empower users and fulfillers alike with rules-based entitlements, an identity management portal, and embedded Okta actions, all within the ServiceNow interface!

Key Features:

- **Self-Service Portal** allows end users to make requests ranging from app access to password reset
- **Approvals Engine** ensures that access requests are vetted through the appropriate people
- **Attestation Engine** maintains accuracy and history of access entitlements
    - Configured approvals for initial and recurring access certification, as well as access removal
    - Customize recertification time period for each application or group
    - Enforce access removal for contractors/vendors on a set schedule
- **Access Rules** automatically grant & revoke entitlements based on user attributes
- **Deactivation Rules** automatically warn of account inactivity & deactivate user accounts
- **Granular Access Timing** allows duration or time-based add & removal of access
- **Scheduled Availability** allows access to only be requested during (or outside of) scheduled times
- **Catalog Items** included to empower helpdesk technicians and end-users alike
- **Workflows & Subflows** included for simple extension across the ServiceNow platform
- **Unlimited Customization** to fit your unique needs and processes

Benefits include:

- Allow end users to manage their own identity via self-service, reducing analyst time spent on manual tasks such as password resets and application access requests.
- Improve governance by tracking & recertifying access entitlements through the built-in attestation engine.
- Reduce license expense by automatically granting and revoking access entitlements based on user attributes.
- Avoid stale user accounts by tracking & removing inactive vendor & contractor user profiles.
- Reduce risk profile by automating mundane lifecycle management tasks like group add/remove/change.
- Re-use proven building blocks to create your onboarding/lifecycle processes

What our customers say:

"Using Okta Orchestrator, I estimate that we reduce 10 minutes of work per activity (grant access, change password, etc). If we process 800 activities per week, that saves us $175,000 per year. Automation reduces our risk profile on those activities by an additional $18,000 per year. Those are just direct activity costs. There is also value around governance, security, and reduced licensing costs."
