

The premier development framework for ServiceNow Service Portal

More than just a development framework for Service Portal, YDS is a growing wealth of elements, widgets, and applications to help you build better Service Portals faster.

Are you embarking on a new Service Portal project and need simple, drag-and-drop widgets to add functionality? YDS provides custom-built best-of-breed widgets to fill the gaps of baseline offerings and meet your user experience needs.

Are you building advanced widgets and web applications on Service Portal? YDS elements empower developers with building blocks for sleek, performant user interfaces.

Do you need enhanced intelligence and functionality for a particular user experience? YDS provides turnkey web apps like TableSaw to exceed your business needs and dazzle your users.

Key Features:

YDS consists of various components, from elements to widgets to applications - the simplicity of drag-and-drop and the power to develop custom functionality:

- **Elements:** Foundational building blocks such as select boxes, date pickers, sliders, and more. Elements are tightly bound to model variables for seamless interactions whether controlled by the user or programmatically.
- **Widgets:** Pre-built widgets to drag-and-drop within the Designer. Widgets utilize theme colors and are customizable via options.
- **Applications:** Intelligent web apps built on Service Portal. More than a widget, applications are modern web apps that can offer unlimited functionality.

YDS is proven Service Portal components:

- Consistent look & feel across the framework
- Modular architecture for simplified implementation & maintenance
- Compatible with most modern browsers and devices
- QA-tested and production-ready

YDS offers documentation & support beyond the industry standard

- Dedicated documentation site with examples, screenshots, and code snippets
- Included test page with diagnostics, sample code, and documentation links
- Dedicated email support
- Prioritized YDS additions, updates, and fixes for active subscribers

YDS is alive!

- New elements, widgets, and applications added frequently
- Feedback from subscribers drives the development pipeline
- YDS gets better and better and better...
